
Recombinant Human CEACAM5/CD66e/CEA Protein(C-Fc)**Cat.NO.: TP05004**

3th Edition

Synonyms: Carcinoembryonic antigen-related cell adhesion molecule 5; CEACAM5; Carcinoembryonic antigen; CEA; Meconium antigen 100; CD66e

Description: Carcinoembryonic antigen-related cell adhesion molecules (CEACAMs) belong to a group of mammalian immunoglobulin related glycoproteins. They play critical roles in cell–cell recognition. CEACAM5, also called CEA and CD66e, is characterized by having seven extracellular Ig domains and a glycosylphosphatidylinositol (GPI) anchor. CEACAM5 is expressed primarily by epithelial cells, and functions as a calcium-independent adhesion molecule through homophilic and heterophilic interactions with CEACAM1. Studies have shown that CEACAM5 is overexpressed in a majority of carcinomas, and its overexpression can protect tumor cells from apoptosis. It is commonly used as a cancer marker.

Form: PBS

Molecular Weight: 98.9 kDa

Sequences: Lys35-Ala685

Purity: > 95% by HPLC

Concentration:

Endotoxin Level: <1.0 EU per 1 ug of protein (determined by LAL method)

Storage: Can be stored at +4°C short term (1-2 weeks). For long term storage, aliquot and store at -20°C or -70°C. Avoid repeated freezing and thawing cycles.
